

# ACRATECH

## PROFESSIONAL PHOTOGRAPHIC AND IMAGING PRODUCTS

Our new Acratech GP ballhead has all the benefits and features of our GV2 ballhead including the ability to function as a gimbal head and of course it still weighs less than 1lb, but what really sets the GP apart from all of our other ballheads is that it is also designed to be used upside down, allowing the ball to be used as a leveling base for stitched panoramic images. Even when using your tripod on rocky, uneven terrain the GP Ballhead allows you to pan parallel to the horizon, eliminating the need to carry a separate leveling base to create accurate panoramic images.

## GP BALLHEAD

- Works as a gimbal head with lenses up to 400 f4.0
- Weighs less than 1 lb (.45kg) with quick release clamp
- Easily holds 25 lbs (11.4kg) at any angle
- Full movements allow any camera position
- Fully adjustable tension control
- Precision C.N.C. machined
- Compatible with Kirk, Arca, R.R.S., and many other QR plates
- Fits all standard tripods (1/4-20 and 3/8-16 threads)
- Laser engraved dual degree markings
- Solid precision feel
- Beautiful satin black anodized finish
- Long lasting stainless steel hardware
- All knobs are secured so they cannot vibrate loose and fall off
- Ball will not shift once tightened
- Made in U.S.A.
